AMENDMENTS TO THE CLAIMS:

This listing of claims replaces all prior versions and listings of claims in the

application:

LISTING OF THE CLAIMS:

1. (Currently Amended) A method, performed by one or more processing devices, for

use in an electronic learning system that stores information as learning objects, the method

comprising:

designating a target learning object as a project object; and

storing version dependency data in the project object, the version dependency data

identifying versions of other learning objects upon which the project object depends, the other

learning objects including at least a version of a first object upon which the project object

directly depends, and a version of a second object upon which the project object indirectly

depends, the project object being an object that is separate from the first object and the second

object;

wherein the other learning objects, including the first and second objects, do not store

version dependency data, and wherein the other learning objects store dependency data that

identifies an object dependency but that does not identify a version dependency, the other

learning objects relying on version dependency data in the project object for identification of

version dependency first object stores dependency data identifying the second object upon which

the first object depends, and wherein the first object does not store version dependency data

Applicants: Wolfgang Theilmann, et al.

identifying the version of the second object upon which the first object depends, the version of the second object upon which the first object depends being determined by the version dependency data in the project object.

## 2. (Cancelled)

- 3. (Original) The method of claim 1, wherein designating comprises storing data in the project object that indicates that the target learning object is the project object.
- 4. (Currently Amended) The method of claim 1, wherein the target learning object comprises a portal to other additional learning objects in the electronic learning system.
- 5. (Currently Amended) The method of claim 1, wherein the other additional learning objects define a course offered via the electronic learning system.
- 6. (Original) The method of claim 4, wherein the target learning object comprises a glossary of a course.
- 7. (Previously Presented) The method of claim 1, wherein the electronic learning system comprises a master repository that stores globally-available learning objects and a local repository that stores locally-available learning objects, and the method further comprises:

identifying learning objects upon which the project object depends;

moving the project object and learning objects upon which the project object depends between the local repository and the master repository.

8. (Original) The method of claim 1, wherein the electronic learning system comprises a master repository that stores globally-available learning objects and a local repository that stores locally-available learning objects, and the method further comprises:

copying the version of the first object from the master repository to the local repository without copying the project object to the local repository; and

resolving dependencies associated with the version of the first object in accordance with a predefined rule.

- 9. (Original) The method of claim 8, wherein the version of the first object depends on the second object, and resolving comprises making the version of the first object depend on a most current version of the second object in the local repository.
- 10. (Previously Presented) The method of claim 1, wherein the electronic learning system comprises a master repository that stores globally-available learning objects and a local repository that stores locally-available learning objects, and the method further comprises:

copying the project object, the version of the first object, and the version of the second object from the master repository to the local repository;

creating a second version of the first object; and

updating the version dependency data in the project object to reference the second version of the first object.

11. (Original) The method of claim 1, wherein at least one of the first and second objects stores information about a dependent object.

12. (Original) The method of claim 11, wherein the information comprises an identity of the dependent object.

13. (Original) The method of claim 1, wherein the electronic learning system comprises a master repository that stores globally-available learning objects and a local repository that stores locally-available learning objects, and the method further comprises:

copying the version of the first object from the master repository to the local repository without copying the project object to the local repository; and

resolving dependencies associated with the version of the first object in favor of current versions of objects on which the first object depends.

14. (Currently Amended) A computer program product for use in an electronic learning system that stores information as learning objects, the computer program product being tangibly Applicants: Wolfgang Theilmann, et al. Attorney's Docket No.: 13909-161001

embodied in an information carrier, the computer program product being operable to cause one or more machines to:

designate a target learning object as a project object; and

store version dependency data in the project object, the version dependency data identifying versions of other learning objects upon which the project object depends, the other learning objects including at least a version of a first object upon which the project object directly depends, and a version of a second object upon which the project object indirectly depends, the project object being an object that is separate from the first object and the second object;

wherein the other learning objects, including the first and second objects, do not store version dependency data, wherein the other learning objects store dependency data that identifies an object dependency but that does not identify a version dependency, the other learning objects relying on the version dependency data in the project object for identification of version dependency first object stores dependency data identifying the second object upon which the first object depends, and wherein the first object does not store version dependency data identifying the version of the second object upon which the first object depends, the version of the second object upon which the first object depends being determined by the version dependency data in the project object.

16. (Original) The computer program product of claim 14, wherein designating comprises storing data in the project object that indicates that the target learning object is the project object.

- 17. (Currently Amended) The computer program product of claim 14, wherein the target learning object comprises a portal to other <u>additional</u> learning objects in the electronic learning system.
- 18. (Currently Amended) The computer program product of claim 14, wherein the other additional learning objects define a course offered via the electronic learning system.
- 19. (Previously Presented) The computer program product of claim 14, wherein the target learning object comprises a glossary of a course.
- 20. (Previously Presented) The computer program product of claim 14, wherein the electronic learning system comprises a master repository that stores globally-available learning objects and a local repository that stores locally-available learning objects, and the computer program product further comprises instructions operable to cause the one or more machines to:

identify learning objects upon which the project object depends;

move the project object and learning objects upon which the project object depends between the local repository and the master repository. Applicants: Wolfgang Theilmann, et al.

21. (Previously Presented) The computer program product of claim 14, wherein the

electronic learning system comprises a master repository that stores globally-available learning

objects and a local repository that stores locally-available learning objects, and the computer

program product further comprises instructions operable to cause the one or more machines to:

copy the version of the first object from the master repository to the local repository

without copying the project object to the local repository; and

resolve dependencies associated with the version of the first object in accordance with a

predefined rule.

22. (Original) The computer program product of claim 14, wherein the version of the

first object depends on the second object, and resolving comprises making the version of the first

object depend on a most current version of the second object in the local repository.

23. (Previously Presented) The computer program product of claim 14, wherein the

electronic learning system comprises a master repository that stores globally-available learning

objects and a local repository that stores locally-available learning objects, and the computer

program product further comprises instructions operable to cause the one or more machines to:

copy the project object, the version of the first object, and the version of the second

object from the master repository to the local repository;

create a second version of the first object; and
